
(a) the loss
$\frac{1}{2}r^2$ (χ^2, $\delta = \infty$)
Huber, $\delta = 1$
Huber, $\delta = 2$
Huber, $\delta = 3$
loss $\ell_\delta(r)$
pull $r = (f - t)/\sigma_k$
(b) its derivative: the pull of one bin on the fit
χ^2
$\delta = 1$
$\delta = 2$
$\delta = 3$
influence $\ell'_\delta(r)$
pull r
